NamSys expands CashNET product line

Bolton, ON, May 16, 2006 - NamSys Inc. today announced the official release of a new model of their CashNET self-service retail deposit solution, called CashNET-V, that is designed for cash-intensive environments like restaurants and retail stores.

Like the larger CashNET machine, employees use the CashNET-V to quickly deposit cash sales during or at the end of their shift. The machine verifies each inserted note, rejecting any counterfeits, and stores the notes in a secure safe. The included software produces detailed balancing reports for store managers.

The CashNET-V uses the same touch-screen software as the larger model and seamlessly integrates with NamSys' networked monitoring and control software.

NamSys president John Siemens commented, "we believe that this product will allow us to not only serve new market segments but also offer a unified CashNET platform for our customers that have both small and large stores."

NamSys Inc. was founded in 1989 and offers a full range of software and hardware products to solve the cash processing needs of the banking and retail industries. For further information, contact Jason Siemens at 1-800-668-1961 or visit our website at www.namsys.com.
