

The NamSys ACS solution is a web-based software system used by cash in transit operators for bag tracking and logistics.

Barcode bag tracking

Barcode labels on incoming bags are input manually or read using off-the-shelf barcode scanners.

Outgoing manifest creation

The system groups outgoing bags scheduled for delivery by route or destination vault and produces a printed manifest in PDF format.

Configuration

The system maintains a complete database of financial institutions, vaults, carrier branches, locations, contacts and routes.

Accountability

The system logs all user activity and keeps a complete field-level audit trail of any changes that are made.

Bag label	Location id	Bag count	Declared amount
893829	11002	1	12,000.00
239823	10209	1	5,030.00
298310	10299	1	7,200.00
021398	10373	1	34,000.00
A2378723	20390	2	96,500.00
1209382238	10338	1	2,400.00
55959	10298	1	900.00

Hosted, Reliable & Secure

NamSys hosts the servers and software in a secure facility and manages all of the maintenance, upgrades and backups.

The website uses the same encryption used by banks to ensure that your transactions cannot be intercepted in transit. Each server is protected by a firewall and intrusion detection software.

Cost

Available for a low monthly fee per carrier branch/depot.

Free trials of the system are available, please call us at 1-800-668-1961 to register.
